PROPOSAL · NOT YET WIRED INTO THE CODEBASE

Trust-blue confidence, sunset-warm at the edges.

One brand blue carries every important decision, the way Uber's single accent does. Warmth comes from an ember accent and generous, Airbnb-style radius rather than from color noise. The type is one variable family used at different weights — the same trick behind Cereal, Uber Move, and Skyscanner Relative.

Color

Five named tokens. One accent does the brand work — everything else is ink, cloud, or a semantic signal that stays out of the accent's way.

Ember

Type

Plus Jakarta Sans, one variable family, self-hosted. Hierarchy is built from weight and size — never a second typeface — matching how Cereal, Move, and Relative each work.

Display · 800
34px–54px, −2.5% tracking. Hero moments only.

Flights to Paris from €89

Title · 700
22–24px. Card headers, section titles.

Weekend deals near you

Body · 500
16px, 1.6 line height. Descriptions, copy.

Direct flights save you an average of 2 hours versus the cheapest connecting option on this route — worth the extra €40 for a weekend trip.

Caption · 600
12px, uppercase, wide tracking. Labels, eyebrows.

NONSTOP · ECONOMY · 1 BAG INCLUDED

Numeric · 800
Tabular figures for anything that lines up in a column — prices, durations, times.

€214 13:05 → 15:20 2h 15m

Spacing & radius

A 4px grid, shared with Airbnb and Uber's own systems. Radius leans generous on surfaces (Airbnb) and pill-shaped on actions (both).

What was borrowed, and from where

Grounded in each app's actual, current design system — not a vibe-based guess.

05 / Research

AIRBNB · DLS

Warmth, one typeface, generous radius

A near-monochrome ink-and-grey base with a single high-chroma accent (Rausch #FF385C) reserved for primary actions, and one custom typeface (Cereal) carrying all hierarchy through weight. We kept the "one accent, one face" discipline and the generous card radius; we shifted the accent to a warmer sunset-orange to leave blue free for the primary brand role.

UBER · BASE

High contrast, single saturated accent

Near black-and-white for maximum legibility, one saturated blue (#276EF1) that always means something, and a strict 4px baseline grid with a formulaic type scale (14px base ×1.125 per step). We adopted the "single accent that always means something" rule directly, and the 4px grid.

SKYSCANNER

Trust-blue optimism, travel warmth

Sky Blue (#0770E3) as the lead color, paired with a supporting palette of warm tones "found in destinations around the world," and their own Relative typeface. This app's whole brief is "Skyscanner-inspired," so cobalt blue is the anchor here — deepened toward dusk rather than daytime, to read as more premium and less like a stock UI-kit blue.

Turning this into code

Nothing here is wired up yet. This is what lands in `src/global.css` and `src/theme/` if you approve the direction.

06 / Next

01 **Register the palette as Tailwind v4 theme tokens**
Add the color ramps above to the `@theme` block in src/global.css, so `bg-cobalt-500` / `text-ember-700` etc. become real utility classes.

02 **Add Plus Jakarta Sans as a loaded font**
Needs the `@expo-google-fonts/plus-jakarta-sans` package and an `expo-font` load step before the app renders. NEEDS APPROVAL

03 **Add spacing, radius and shadow scales to the theme**
Same `@theme` block — `--spacing-*`, `--radius-*`, plus two boxShadow tokens for card / raised.

04 **Build Button, Chip, and Card as the first shared components**
Per AGENTS.md's promotion rule — these three are already used on 2+ screens in the mockup above, so they're not premature.

05 **Dark mode via NativeWind's `dark:` variant**
Token values above already have light/dark pairs — port them as `dark:`-prefixed utilities or CSS variables per color scheme.

Design proposal · v0.1 · nothing in this document is implemented in the app yet.
